EDUCATION

University of British Columbia - 3rd Year

B.Sc., Statistics w/ thematic concentration in Computer Science

Vancouver, Canada

Expected Graduation: Apr 2026

TECHNICAL SKILLS

Language: Java, Python, C++, R, JSX, JavaScript, Php, HTML/CSS

OS: MacOS, Windows

Front-end: React, Vite, Tailwind

Back-end: MariaDB, PostgreSQL, RStudio

Software: MS Teams, Word, Excel, Powerpoint, Figma, Github, Jupyter, Slack, RStudio, Adobe Photoshop, Final Cut Pro

WORK EXPERIENCES

Part time Cast Member, Scotiabank Theatre Cineplex

August 2022 - Present

Vancouver, BC

- Resolved customer services related to malfunctioning kiosk, mobile ticketing and order services
- Trained new cast members on the ticketing and payment systems

Software Engineer Intern, Verenza

August - October 2024

Arizona, USA (Remote)

- Documented codebase with clear specifications for supporting maintenance and future development
- Communicated project updates and technical challenges regularly to ensure alignment within the team and project goal
- Developed dynamic pages and functions using JSX and Tailwind CSS while ensuring mobile responsiveness

Instructor, STEMex Hong Kong

September - December 2020

- Led science and technology workshops, teaching fundamental coding principles with Scratch for students at different levels.

PROJECTS

Movie Review Website | Svelte, SQLite, Php, XAMPP JavaScript, HTML/CSS

- Using Svelte, Html, JavaScript, and CSS to construct front-end design.
- Accomplished database connection, user log, and movie rating data by utilising php, and XAMPP to set up a local web server.

Game Platform Systems | PostgreSQL, UML Diagram

- Created a practical, real-world database system using MySQL that links game information, third-party news, and user reviews.

Cook AI | MongoDB, React, JavaScript, PostgreSQL

- Collaborated with a team to develop a recipe generator using ChatGPT API, creating meal recipes from ingredient snapshots
- Designed UI/UX design using Figma, with focus on wireframing and applying user experience principles
- Documented codebase and debugging frontend with test cases.

Image Chaining, Mapping, Compressing | C++

- Implemented a doubly-linked list for connecting pieces of images together. Applied Stack, Queue classes along with building a Deque class for solving maze distance path within the base image colouring scheme.
- Integrated Quad Tree-based space partitioning in efficient image processing and lossy image compression

UBC Men's Basketball Team Roster Log | Java, UML Diagram

- Applied OOP principles with java to create an application tracking for the UBC men's basketball roster.
- Built the GUI by implementing Swing library along with error handling for retrieving saved logs.
- Achieved query saving and storing by using nio.file packages and JSON library.

Pac man | JavaScript, HTML, CSS

- Recreated Pac man using JavaScript, CSS, and HTML, with customizable difficulty levels and dynamic obstacles.
- Enhanced user interface and responsiveness to optimise player experience.

Digit Mastermind | Java

- Developed a single-player strategy game with Java, featuring interactive inputs via the terminal.

London Precipitation Predictability Report | R, Jupyter Notebook

- Worked in a group where we tidied, trained, and tested gathered data for accurate analysis using R in Jupyter.
- Conducted a predictability analysis using classification by implementing 'knn' package and ggplot for data visualisation.

Spotify Modelling Report | R, RStudio

- Analyzed correlation & distribution of variables to develop model for predicting song streams in Spotify.
- Employed data transformation and variable selection from backward elimination and Mallows's Cp for model accuracy.

Credit Card Default Classification | Python, Jupyter Notebook,

- Evaluated model performance and optimized predictive accuracy through hyperparameter tuning and cross validation on models
