WORK EXPERIENCES

JUNIOR DEVELOPER, miles (4 Month Contract) **September 2026 - Present**

- Led the initial phase for MILE Wellness, a premium boutique wellness movement studio in Makati. Worked directly with founders in translating the client's editorial brand vision into the sitemap and content structure across 6 core pages and established a clear scope and delivery roadmap from first meeting.
- Architected a Supabase database schema covering admin, user, instructor, and event tables with foreign key relationships and designed booking and payment tables including class packages, token ledger, payment transactions, and bookings.

SOFTWARE ENGINEER INTERN, VERZENA **August - December 2024**

- Collaborated with a small engineering team and startup founders to map the end-to-end client onboarding workflow, identify gaps in project visibility and client communication, then designed and launched a scalable web portal that directly addressed these challenges.
- Researched local digital consultancy portals and mapped the full user flow in Figma before implementation, aligning with founders on visual hierarchy and component structure through iterative prototype reviews.
- Built reusable client-side UI components in React and server-side data pipelines handling input validation and normalization before PostgreSQL storage, working within an Agile workflow through Git pull request reviews.
- Launched the platform within a 4-month timeline, contributing to landing Verzena's first 2 clients within the same year of launch.

TECHNICAL SKILLS

Language: Java, Python, C++, R, JavaScript, Php, SQL (Postgres, Oracle), HTML/CSS
Frameworks: React, Vite, TailwindCSS, Next.js, Node.js, Javax, JUnit
Developer Tools: Git, GitHub, VSCode, IntelliJ, Word, Excel, Powerpoint, Figma, Jupyter, Slack, RStudio

PROJECTS

MyBinder | Next.js 14, Python, React, Supabase, PostgreSQL, TailwindCSS 🔗

- Observed at pokemon cards shows that vendors relied on physical displays while collectors lacked a digital way to showcase their binders. Using React to build MyBinder from scratch with customizable layouts and shareable online binders to showcase and share their binders beyond in-person events.
- Diagnosed scalability and search latency issues after initially storing scraped card metadata in a large CSV file, instead Migrated the catalogue to Supabase with structured schemas and indexed queries, improving data organization, search performance, and catalogue scalability for new card releases.
- Prioritized accessible sharing as a core use case and built a public read-only binder pages using dynamic routing and a public API endpoint, with QR Codes linking to the same collection. Enabled anyone with the link to view the binder through the link.

ScanAhead App | React, TypeScript, SupaBase, Gemini API, ElevenLabs API, KIRIEngine API 🔗

- Identified delayed access to care and fragmented patient doctor communication as major struggles in Canada Healthcare, then co-developed a unified triage platform integrating 3 APIs for voice transcription, 3D injury scanning, and structured AI clinical summaries to streamline efficient patient-to-doctor intake.
- Mapped patient and physician needs into 2 dashboards and designed a responsive Bento-style interface. Prioritized case summaries, appointment, and patient submissions to make critical information easier to access.
- Addressed inconsistent AI-generated clinical summaries by implementing structured prompts and standardized response schemas to control Gemini outputs. Improved summary consistency across varying patient inputs giving physicians a more reliable and clinical standard case overview.

CookAI App | React, Vite, JavaScript, ChatGPT API 🔗

- Collaborated with a team to engineer a full-stack AI Recipe Generator, integrating ChatGPT API to produce personalized meal recipes from phone snapshots of home leftover ingredients.
- Mapped ingredient to recipe process in Figma and translated it into a functioning interface in React. Prioritized a simple ingredient selection flow and clear recipe presentation.

EDUCATION

University of British Columbia September 2022 - April 2026
B.Sc., Statistics, Concentration in Computer Science Vancouver, Canada
